REMOTAIR by Alisea: How COVID-19 Boosts Creativity to Engineer Innovative Air Quality Solutions for HVAC Systems

By: Alisea Vll Business Wire News Release

February 08, 2021 at 08:00 AM EST

Introducing **REMOTAIR**, the first artificial intelligence-based solution for continuous monitoring of an HVAC system's operational health and cleanliness. REMOTAIR's patent pending technology alerts users of any critical event while also providing proactive insights to protect individuals' health and safety in industrial, commercial and residential settings. Special algorithms, reinforced and tested for over five years, analyze variables provided by systems installed sensors and data collection technologies. REMOTAIR is the brainchild of Alisea S.r.l., the leading company in the HVAC systems management and cleaning industry for the Italian market.

Andrea Casa - Alisea CEO (Photo: Business Wire)

"Among the numerous strengths, in particular, is REMOTAIR's diagnostic capabilities as well as the ability to continuously manage various distribution and air purification devices, checking their correct functioning in real time," says Andrea Casa, Alisea CEO, and also International Director of N.A.D.C.A. (National Air Duct Cleaners Association). "In the event of anomalies, the system automatically sends an alert, allowing for technicians to promptly carry out maintenance and sanitation interventions aimed at restoring cleanliness and functional efficiency. Furthermore, the artificial intelligence of REMOTAIR has made it possible to develop self-learning functions for predictive analysis, thus anticipating potential danger for human health well in advance. This allows for optimization of costs, specifically for information and maintenance, as those costs can be high when contamination of a system has already occurred. This is a real headache for SMEs, which will allow employers to demonstrate their HVAC systems are always clean, providing their protection against any hazards that may arise from using a contaminated system."

Alisea has over 20 years of experience as the premier duct-cleaning and HVAC service company in Italy. The development of REMOTAIR has been facilitated by the 20+ years of experience boosted by important collaborations with public and private research centers.

"We are now establishing REMOTAIR's international commercial partnerships. Our goal is to connect the technology and the company's extensive know-how and capabilities to the facilities management systems that support HVAC plants in any commercial, industrial, residential building around the world," Andrea Casa concludes.
