### REMOTAIR by Alisea: How COVID-19 Boosts Creativity to Engineer Innovative Air Quality Solutions for HVAC Systems

By: Alisea via Business Wire News Release

February 06, 2021 at 08:09 AM EST

Introducing REMOTAIR, the first AI-based intelligence-based solution for continuous monitoring of an HVAC system's operational health and cleanliness. REMOTAIR's patent-pending technology alerts users of any critical issue while also providing preventive diagnosis to protect individuals' health and safety in industrial, commercial and residential settings. Special algorithms, researched and tested for over five years, analyze variables provided by system-installed sensors and data collection technologies. REMOTAIR is the brainchild of Alisea S.r.l., the leading company in the HVAC systems management and cleaning industry for the Italian market.

The press release features multimedia. View the full release here: <https://www.businesswire.com/news/home/202102060052884en>

"Among the numerous strengths, in particular, is REMOTAIR's diagnostic capabilities as well as the ability to continuously monitor various distribution and air purification devices, checking their correct functioning in real time," says Andrea Costa, Alisea CEO and also International Coeditor of N.A.D.C.A. (National Air Duct Cleaners Association). "In the event of anomalies, the system automatically sends an alert, allowing for technicians to promptly carry out maintenance and substitute interventions aimed at restoring cleanliness and functional efficiency. Furthermore, the artificial intelligence of REMOTAIR has made it possible to devise self-learning functions for predictive analysis, thus anticipating potential danger for human health well in advance. This allows for optimization of costs, specifically for intervention and maintenance, as these costs can be high when contamination of a system has already occurred. This is a real paradigm shift, which will allow engineers to demonstrate their HVAC systems are always clean, providing firm protection against any legal risks that may arise from owning a contaminated system."

Alisea has over 20 years of experience as the premier duct cleaning and HVAC service company in Italy. The development of REMOTAIR has been facilitated by the 20+ years of experience backed by important collaborations with public and private research centers.

"We are now establishing REMOTAIR's international commercial partnerships. Our goal is to extend the technology and the company's extensive know-how and capabilities to the facilities management systems that support HVAC plants in any commercial, industrial, or residential building around the world," Andrea Costa concludes.
